

Computerized Maintenance Management system - CMMS bundled with QMS

EzyPro CMMS – the faster, simpler way to transform maintenance activities, work order management, asset tracking, inventory and more!

Improve productivity, response times and communication.

What is EzyPro CMMS?

A computerized maintenance management system (CMMS) that improves overall equipment management at the facility level significantly, also offered bundled along with Quality Management System Software.

Why customers use EzyPro CMMS

- To implement superior task handling between users, managers and technicians.
- To make data-driven decisions that deliver better business and maintenance performance.
- To keep the maintenance team focused on the right work, quick response and get real time asset status

Asset Register and Tracking

- View asset hierarchies and groups
- QR Code embedded asset tracking
- Easily retrieve asset history
- Initiate work orders with ease

Maintenance Activities

- Reduce downtime due to a proactive and data-driven approach to maintenance
- Support technicians to perform better and faster as per best practices
- Access the system anywhere from mobile devices and cloud

Dashboards

- Establish, benchmarks and monitor KPIs
- Control maintenance backlog and track service level adherence
- Track all work orders from one place and drill down to details

“Implementing EzyPro CMMS has transformed our Asset and Maintenance Management, we integrated it with our Quality Management system giving us significant gains in performance of maintenance operation, reducing costs and downtime and increasing asset utilization”

Ride the wave of digital transformation in management systems, combine QMS and CMMS

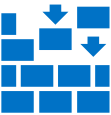

Corrective and Preventive maintenance

- Trigger maintenance tasks based on events, or condition from equipment on location online and in real-time basis
- Simplify scheduling and alerting
- Manage Annual Maintenance Services easily

Problem diagnosis and root-cause analysis

- Improve the reliability, utilization, performance and operability
- Assign cause and action codes to minimize trial-and-error-based corrective maintenance;

Continuous Improvements

- Improve operational efficiency and effectiveness.
- Track KPI trends and initiate change management
- Make smarter asset management decisions, create a culture of continuous improvement through data and event trends

Flexible Subscription Plans

Add modules and features as you grow in user friendly way

- We deliver the best value with our plan features and subscription bundles
- You can start a free trial and experience it prior order
- Now available in Azure Marketplace
- Customizable with checklists and standards framework
- Our ISO Context KPI and CMMS Dashboards improve outcomes and business performance
- A truly one stop SaaS that achieves improvements around quality, production and superior asset management.

Easy to report, easy to act – start with CMMS and add on QMS features

In a planned and phased manner computerize asset register, set up a work order system, set up preventive maintenance scheduling and update parts inventory all in a data driven approach.

Become Efficient and Effective..... by choice

Why EzyPro CMMS?

Implementing EzyPro CMMS ensures automating preventive maintenance, faster response time, improved workflow management, improved asset tracking & reporting, and delivers improved performance.

Harness the power of data visibility connected with daily maintenance tasks, asset and inventory data to gain control over your asset management goals and better productivity of your field team
